

SYMBIOSIS INSTITUTE OF TECHNOLOGY, PUNE
Constituent of Symbiosis International (Deemed University), Pune

Name of Student: Anurag Thakur	PRN:2504022040
Semester: III	Year : AY 2026-27
Subject: Programming with Java	
ASSIGNMENT No : 17	
TITLE : Swing and Applets	

Problem Statement

Write a Java program to demonstrate the use of Swing and Applets

Learning Objectives

To develop graphical user interfaces using Swing components and Applets.

Programme

1.Create a simple **Student Registration Form GUI** using Swing.

CODE:

```
import javax.swing.*.*;
import java.awt.*.*;
import java.awt.event.*;

public class Exp17a extends JFrame implements ActionListener {

    JLabel l1, l2, l3, l4;
    JTextField t1, t2, t3;
    JComboBox<String> c1;
    JButton b1;

    Exp17a() {
        setTitle("Student Registration Form");
        setSize(400, 300);        setLayout(new
        GridLayout(5, 2, 10, 10));

        l1 = new JLabel("Student
ID:");    l2 = new
JLabel("Name:");    l3 = new
JLabel("Course:");    l4 = new
JLabel("Gender:");

        t1 = new JTextField();
        t2 = new JTextField();
        t3 = new JTextField();

        c1 = new JComboBox<>(new String[]{"Male", "Female", "Other"});
```

```

        b1 = new JButton("Register");
b1.addActionListener(this);

        add(l1);
add(t1);
add(l2);
add(t2);
add(l3);
add(t3);
add(l4);
add(c1);
add(new
JLabel(""));
add(b1);

        setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
        setVisible(true);
    }

    public void actionPerformed(ActionEvent e) {
        String id = t1.getText();
        String name = t2.getText();
        String course = t3.getText();
        String gender = (String) c1.getSelectedItem();

        JOptionPane.showMessageDialog(this,
            "Student Registration Successful!\n\n" +
            "Student ID: " + id +
            "\nName: " + name +
            "\nCourse: " + course +
            "\nGender: " + gender);
    }

    public static void main(String[] args) {
new Exp17a();
    } }

```

OUTPUT:

2. Create a simple **Employee Registration Form** using **Java Swing GUI** that takes employee details such as Employee ID, Name, Department, and Salary. Display the entered information in a dialog box

CODE:

```
import javax.swing.*.*;
import java.awt.*.*;
import java.awt.event.*;

public class Exp17b extends JFrame implements ActionListener {

    JLabel l1, l2, l3, l4;
    JTextField t1, t2, t3, t4;
    JButton b1;

    Exp17b() {
        setTitle("Employee Registration
Form");    setSize(400, 300);
        setLayout(new GridLayout(5, 2, 10, 10));

        l1 = new JLabel("Employee
ID:");    l2 = new JLabel("Name:");
        l3 = new JLabel("Department:");
        l4 = new JLabel("Salary:");

        t1 = new JTextField();
        t2 = new JTextField();
        t3 = new JTextField();
        t4 = new JTextField();

        b1 = new JButton("Register");
        b1.addActionListener(this);

        add(l1);
        add(t1);    add(l2);
        add(t2);    add(l3);
```

```

add(t3);    add(l4);
add(t4);    add(new
JLabel(""));
add(b1);

    setDefaultCloseOperation(JFrame.EXIT_ON_CLOSE);
setVisible(true);
}

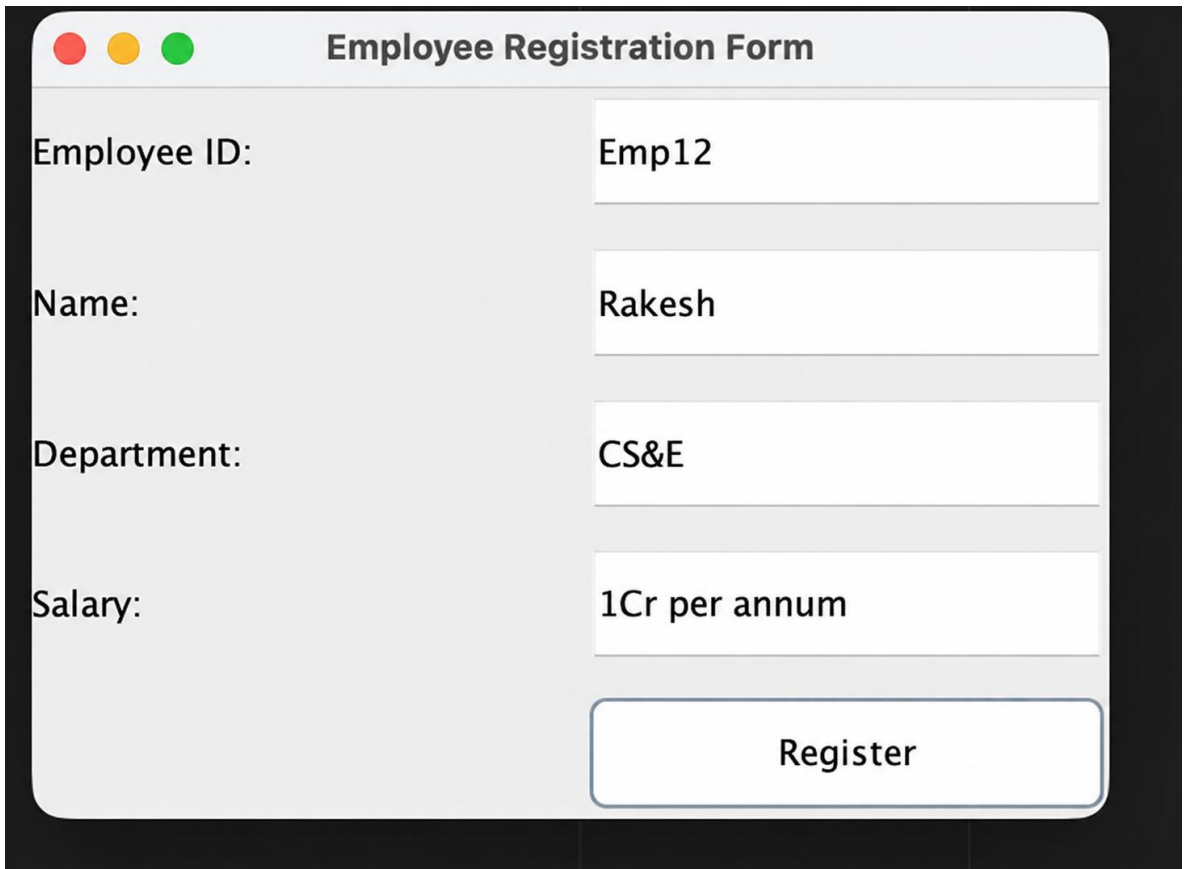

public void actionPerformed(ActionEvent e) {
    String id = t1.getText();
    String name = t2.getText();
    String department = t3.getText();
String salary = t4.getText();

    JOptionPane.showMessageDialog(this,
        "Employee Registration Successful!\n\n" +
        "Employee ID: " + id +
        "\nName: " + name +
        "\nDepartment: " + department +
        "\nSalary: " + salary);
}

    public static void main(String[] args) {
new Exp17b();
    } }

```

OUTPUT:

The screenshot shows a Java Swing window titled "Employee Registration Form". It contains four text input fields arranged vertically. The first field is labeled "Employee ID:" and contains the text "Emp12". The second field is labeled "Name:" and contains the text "Rakesh". The third field is labeled "Department:" and contains the text "CS&E". The fourth field is labeled "Salary:" and contains the text "1Cr per annum". At the bottom right of the form is a button labeled "Register". The window has a standard macOS-style title bar with red, yellow, and green window control buttons.

Conclusion:

Thus, the Student Registration Form and Employee Registration Form were successfully created using Java Swing. The applications accept the required details through GUI components and display the entered information using a dialog box.
